1. Project Description

This project is basically about the system that manage the rescue shelter to help the stray cats in IIUM. One of the main purpose is I want to build a system that can manage the rescue shelter for IIUM stray cats with the objectives to rescue, treat (if needed), neutered and find adopters for the cats. This system is supervised by the administrators which all the details of the cat will be registered and keep ongoing updated. Within this user-friendly system, the rescue shelter can be managed very well and systematically.

2. Methodology

2.1 Analysis

This project is called as Aurora Cat Management System. The problem that we have faced before is we have to manage cat data manually. This will cause the data to be lost easily and take a long time to manage cat data manually. So, this project is a management information system to manage cat data. Within this system, it provide capabilities for registering cat's information details, recording cat's health, updating cat's health and registering adopter. Administrator do not needs to manage cat data by writing on paper which will consume more time.

USE CASE DIAGRAM

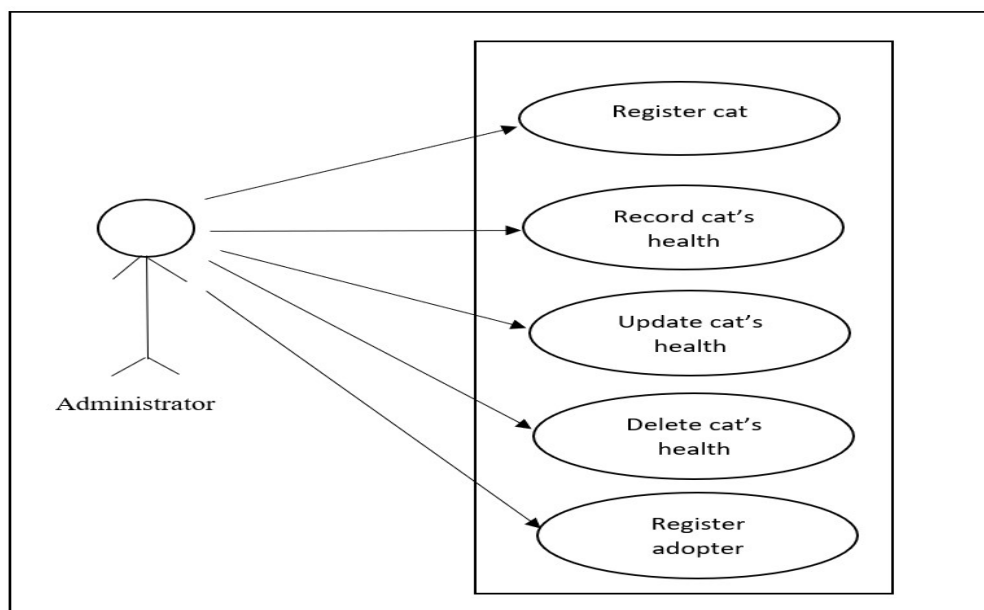

Figure 2.1.1 Use Case Diagram for Cat Management System

FUNCTIONAL REQUIREMENTS

Name	Descriptions	Functions
Register cat	This page enables the administrator to register cat's information details.	Allow administrator to register cat's information details.
Record health	This page displays the cat's health record.	Allow administrator to record cat's health.
Update health	This page enables the administrator to update cat's health.	Allow administrator to update cat's health.
Delete health	This page enables the administrator to delete cat's health.	Allow administrator to delete cat's health.
Register adopter	This page is for the adopter's information details registration.	Allow administrator to register adopter's information details.

FLOWCHART DIAGRAM

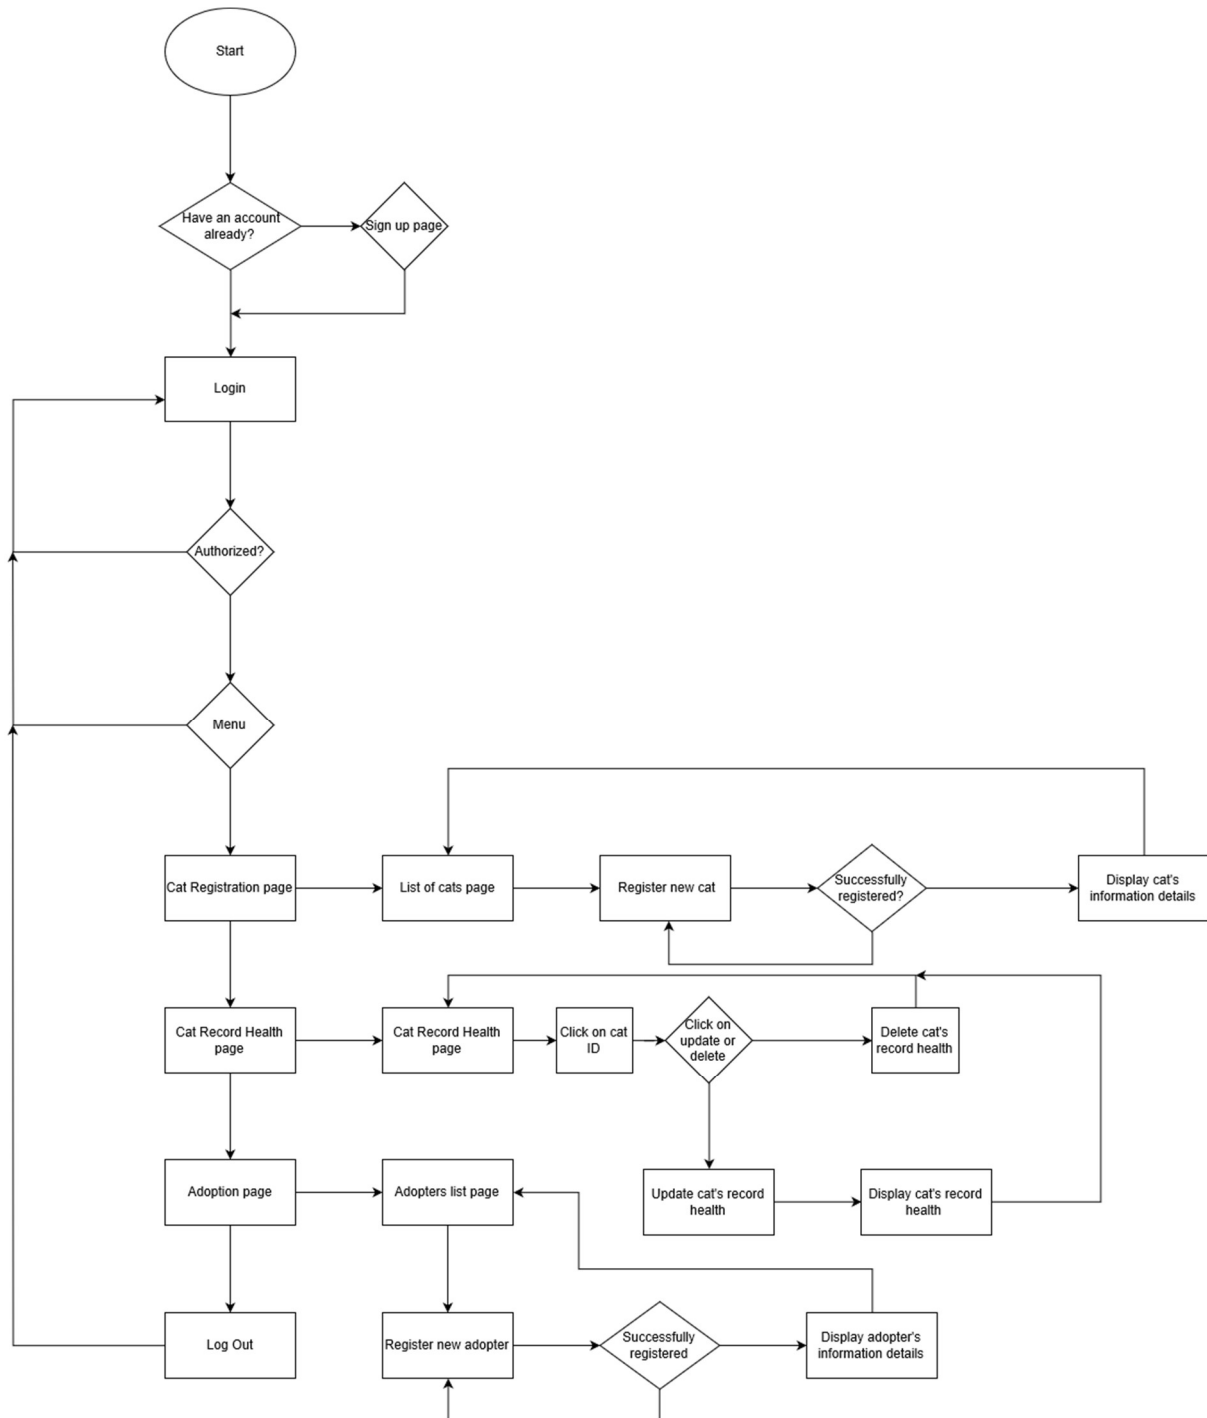

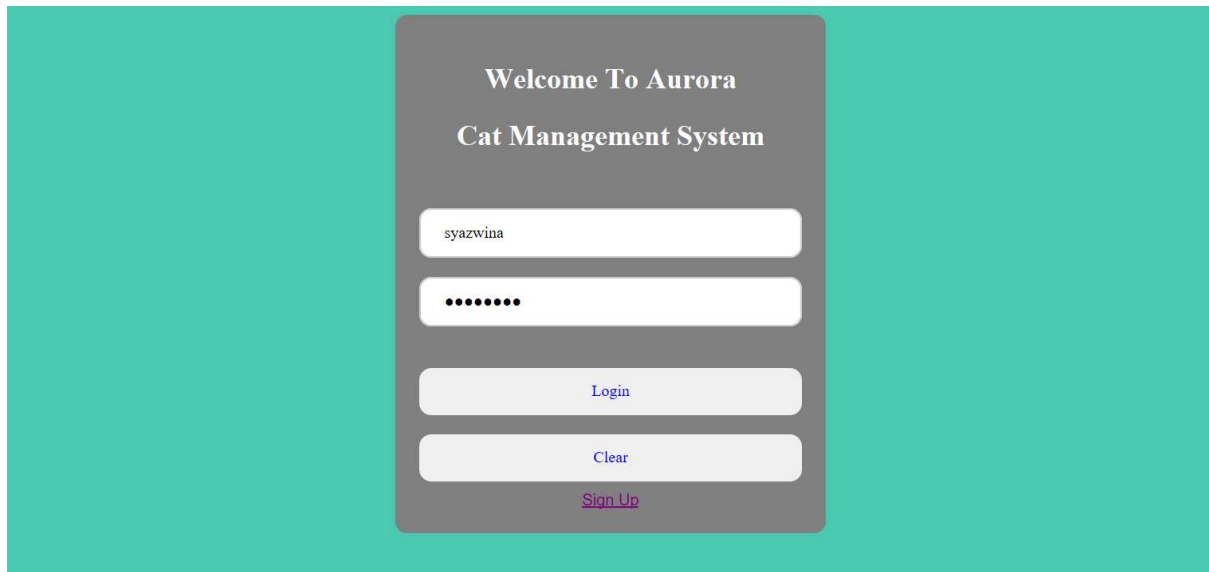

Figure 2.1.2 Flow Chart Diagram for Cat Management System

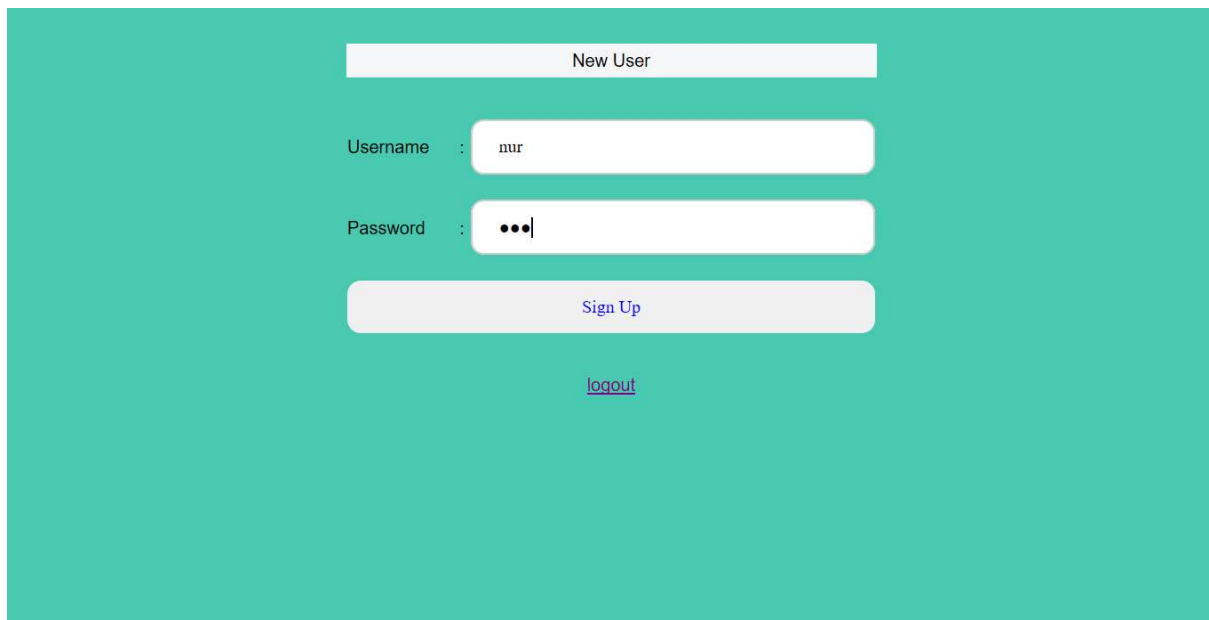

3.2 Development

The screenshot shows a login interface for the 'Aurora Cat Management System'. It features a teal background with a central grey panel. The panel contains the title 'Welcome To Aurora Cat Management System', a username input field with 'syazwina' entered, a password input field with masked characters, a 'Login' button, a 'Clear' button, and a 'Sign Up' link.

Figure 3.2.1 Log In page

In this page, only administer that already sign up can log in to this system. If the username and password entered is wrong, the administer cannot log in and the invalid login error will be shown.

The screenshot shows a sign-up interface for the 'Aurora Cat Management System'. It features a teal background with a central grey panel. The panel contains the title 'New User', a 'Username' label followed by an input field with 'nur' entered, a 'Password' label followed by an input field with masked characters, a 'Sign Up' button, and a 'logout' link.

Figure 3.2.2 Sign Up page

In this page, it will enable a new user to sign up.

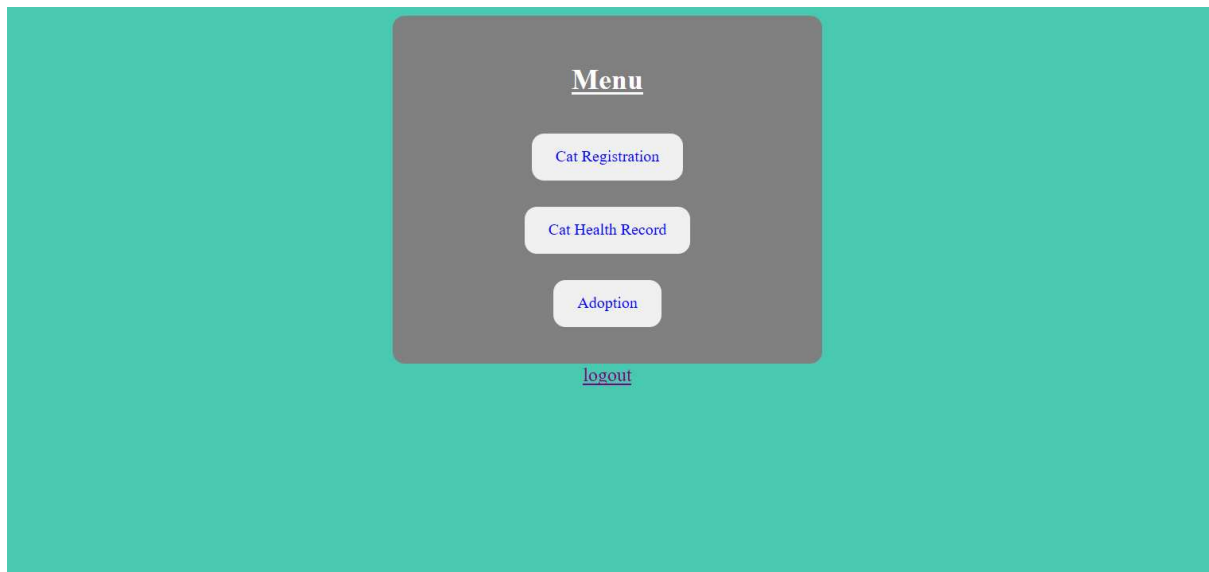

Figure 3.2.3 Main page of the system

In the main page, there are three buttons which have their own functionality:

Cat Registration → Button that will navigate admin to the cat registration page

Cat Health Record → Button that will enable the admin to update and delete the health record of the chosen cat

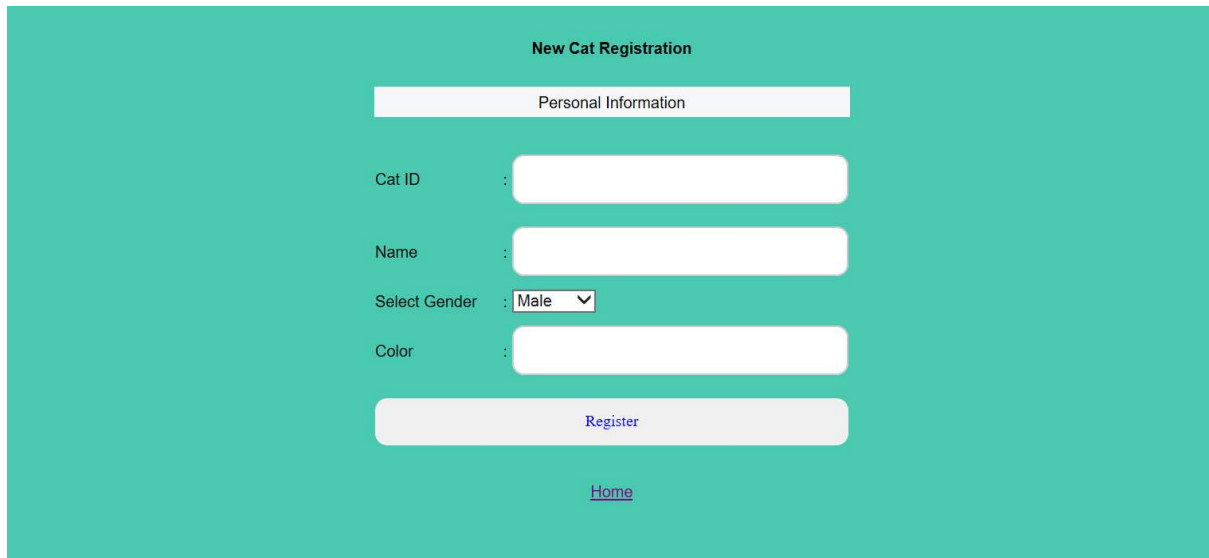

Adoption → Button that will direct administrator to the adopter registration if there is any adopter that want to adopt the cat

List Of Cats				
No	catID	Name	Gender	Color
1	C201	Marie	Female	Grey
2	C202	Smokey	Female	White
3	C203	Mickey	Female	Calico
4	C204	Bob	Male	Orange
5	C205	Kiki	Female	Orange
6	C206	Tom	Male	Light Grey
7	C207	Comel	Female	Brown
8	C208	Dotty	Female	Orange
9	C209	Tupsi	Female	Calico
10	C210	Wakanda	Male	Black

Figure 3.2.11 Log Out page

Log out button is a button that will direct the administrator to the log in page.

3. Conclusion

As a conclusion, executing Aurora Cat Management System, the management cat data procedure has been simplified. Previously, administrator have to manage cat data manually whereas the currently developed system offers an efficient way to perform these operations. The administrator can access cat management information system website online through phone and laptop and register the information needed and manage cat data.

The primary objective of my research and development, I am aiming this year is to build a rescue shelter for IIUM stray cats with the objectives to rescue, treat (if needed), neutered and find adopters for the cats.

This system will ease the administrator to register cat's information details, record cat's health, update cat's health and register adopter's information details. Administrator can also find it easy to do all this task anytime and anywhere. Besides, we also can reduce unnecessary paperwork in maintaining cat's information. It also provides easy, accurate, unambiguous and faster data access.
